

# DiVa

Good Practice for Dissemination and Valorization for Educational Projects in Europe

## Programme

---

## Project Duration

---

12/2009 – 11/2011 (24 months)

## Project Partners

---

AT	FH Joanneum Gesellschaft mbH / MIG
AT	MERIG, Multidisciplinary European Research Institute Graz
BE	Catholic University College Sint-Lieven
BG	European Center for Quality Ltd.
FI	University of Vaasa
IT	University of Genova
PT	AidLearn, Consultoria em Recursos Humanos, Lda.

## Project Description

---

### Background

Many innovative and successful educational projects have been initiated in Europe in the last years. Europe has invested a lot of effort, time and money in developing them and many could be used as good practice examples and would be ideal candidates for further development and transfer. But considering the enormous amount of projects involved, even the most dedicated individual alone has no chances whatsoever to identify the projects which might have the greatest potential for continuous development.

### Project Aims

The main aim of the project DiVa is to carry out European studies about successful educational projects, to evaluate them based on especially defined criteria and to elaborate a best-practice catalogue as well as recommendations. The most successful projects will be selected and evaluated upon defined criteria. The consortium sets a focus on educational projects within the triangle of education, culture and Europe.

### Results

The results are used to develop these products:

- A handbook for dissemination and valorization of educational projects.
- A good practice catalogue with the most successful projects and possible candidates for further development and transfer.
- Recommendations to the EC and National Agencies e.g. for future calls and selection criteria of such projects.

The products developed are provided to the European Commission, to the Lifelong Learning national agencies and to European players in order to help them identify the projects with the highest potential for further development and for transfer of innovation.
